

Accessing Goddard Web-Camera

The network camera Web-Client is a web based application that will enable you to view images at the Goddard Youth Camp. Guest users are limited to the Live View tab and the primary stream only. If the image doesn't appear after the instructions below have been completed, please Log-out and try again later.

Using Internet Explorer under the security tab enable or allow ActiveX controls and Log-in to the following URL:

<http://67.207.238.198>

logon as : *Guest*

Password: *guest*

Note: You will be prompted to download software, which can take several minutes. Since you are using the Web-Client on a PC that does not have the IP Utility installed, the IP adapter will be installed along with the IP ActiveX. You will need administrator rights on your PC to install these.
